## INTUITIVE REMOTE CONTROL IRRIGATION

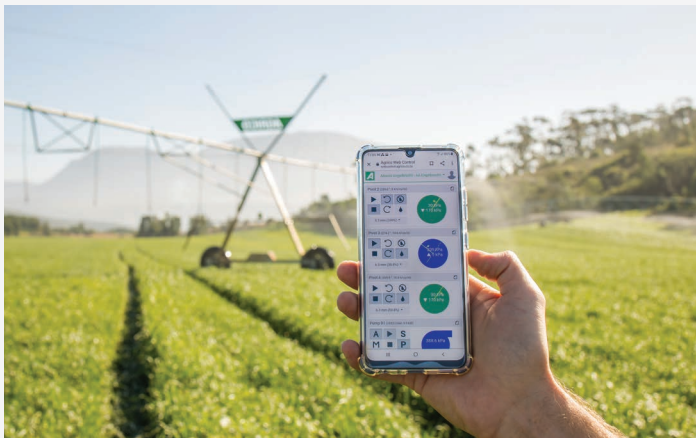

### Agrico Web Control is the ultimate remote control solution for irrigation

Integrate centre pivots and pumps on a single app and control your irrigation from anywhere in the world with Agrico Advanced RAIN and Agrico Pump Controller.

### WHAT IS WEB CONTROL?

Agrico Web Control is an advanced remote irrigation solution, allowing farmers to fully manage and optimise their systems via any internet-enabled device.

#### What does Agrico Web Control do?

- Web Control allows farmers to control their systems online. Enjoy real-time monitoring and automation of your centre pivot irrigation and remote management from any smart device.
- Web Control makes it easy to operate large irrigation systems with multiple pivots, pumps, dam levels, valves and irrigation blocks.

### ADVANCED RAIN

Advanced RAIN automatically controls your centre pivot irrigation according to pressure and enables you to quickly detect and respond to system issues. Key features:

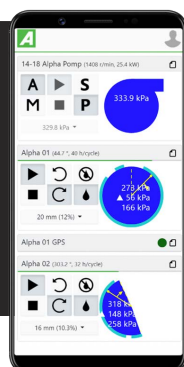

- Control over centre pivots
- Configuration of sectors, triggers and notifications
- Monitoring of historical data
- SMS or missed call notifications of changing status

### PUMP CONTROLLER

Pump Controller can control pumps equipped with direct on line (DOL) starters, star-delta starters, soft starters or variable speed drives (VSD's). Key features:

- Automation and energy optimisation
- Control features and triggers
- Safety functions
- Compatibility with various VSD's
- Allows for flow, vibration and level instrumentation to be added seamlessly

Manage your irrigation with less effort and more accuracy!

More than 100 years of service

# AGRICO WEB CONTROL FEATURES

## REAL-TIME MONITORING & CONTROL

Allows real-time monitoring and reporting of machine status, flow and pressure, pivot positioning, direction, precipitation and more.

## INTUITIVE PROGRAMMING

Simple and easily accessible settings allow flexible yet robust programming. Specific actions can easily be set up to trigger, based on conditions such as position, time and power state.

## CLEAR OVERVIEW

See full system status at a glance. Use the detailed event log and metrics to understand what happened.

## NOTIFICATIONS

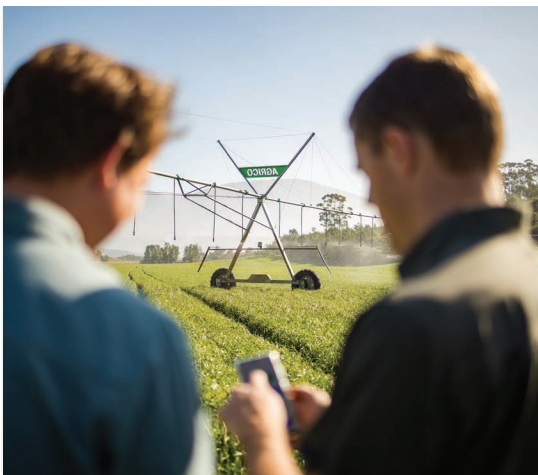

Automated SMS warnings or missed call notifications alert you should problems occur, enabling quick action to protect your crop.

## OVER-THE-AIR UPDATES

Never get left behind. All Agrico internet controlled hardware enjoys over-the-air firmware updates, so you continuously receive new features as they become available.

## DYNAMIC CONTROL

Inter-device communication enables dynamic system pressure control to unlock additional energy savings.

## NOW WITH GPS POSITIONING AND END-PRESSURE CONTROL

Agrico Web Control features key GPS functionality to save more energy. Particularly useful on farms with changing elevations, Web Control is able to determine the position of the last tower in a centre pivot and monitor the pressure at the end of each pivot. Using this information, the system automatically reduces the speed of the pump to save energy when appropriate.

Agrico Web Control has a **24/7 support line**, so an emergency will never leave you stranded!
